

MEDIA & BROADCAST SOLUTIONS

GLOBAL SATELLITE COMMUNICATIONS

MEDIA SOLUTIONS FOR NEWS GATHERING

Thanks to satellite phones, broadband terminals or VSAT ‘fly-away’ antennas, journalists can benefit from the most **reliable telecommunication systems** in the field, irrespective of their location.

Designed to **remain operational in the most extreme conditions**, our media equipments have been conceived to give broadcasters mobile and quick to deploy systems to undertake live broadcasts or report back to the studio in few minutes!

OPTIMIZED FIELD REPORTING

Our complete portfolio includes solutions for all types of requirements and can answer all broadcasters’ needs such as:

- **Voice connectivity** – keeping in touch with the studio/headquarters
- **Store & forward** and **Live streaming**
- **High Broadband** data connectivity for one or several users
- **Audio and video** compression solutions – to improve the speed of file transmission
- Tight control over your budget with **pay-as-you-go** or **monthly subscriptions packages**

BROADCASTING LIVE EVENTS & STREAMING HIGH-DEFINITION VIDEO FROM ANY LOCATION

AUDIO & VIDEO APPLICATIONS

SKYPE TX

The Quicklink TX designed in partnership with Microsoft is a video call management system. It enables professional reception and transmission of multiple Skype video calls through an SDI and HDMI interface.

REMOTE COMMUNICATOR

The Quicklink Remote Communicator allows you to stream video and audio to a web browser and return audio and video or audio only in real time, full duplex with ultra-low delay. The return feed can be received at the studio using a Quicklink Server for output via SDI or NDI.

HEVC MOBILE ENCODING

Designed for performance and portability the encoder transmits broadcast quality, low latency live video over IP from the most challenging network locations. This device also works on 4G/LTE network with cellular SIM cards (up to 8).

PROFESSIONAL AUDIO CAPTURE SOLUTIONS

IEC Telecom provides optimized audio solutions such as software to transform your PC, Mac or Smartphone into a high-quality, live internet broadcasting source. These solutions enable journalists and broadcasters to record, edit and deliver studio-quality audio to radio and TV stations all over the world, from anywhere in the world, just by using a mobile phone or a laptop.
