YahClick covers **86%** of the **Middle East, Central & South West Asia**

YahClick covers **60%** of **Africa's** population

About YahClick

YahClick is a satellite broadband service offering reliable, cost-effective, and high-performance internet connectivity to unserved and remote regions across the Middle East, Africa, Central and South West Asia. Delivered through the latest generation of High Throughput Satellites (HTS), the service uses the efficiencies provided by the reusable Ka-band satellite frequency and is powered by multi-spot beam technology to make satellite broadband affordable and dependable in areas where there is limited or no terrestrial infrastructure.

Key features:

- Cost-effective, fast and reliable connections

- Direct connection through satellite to subscribers
- Quick to install and easy to operate
- Multiple service plans varying in speeds and data download allocations
- Wide-reaching coverage in main cities and rural areas
- Connectivity for team communication and collaboration
- In-country technical and customer care support

Application

YahClick is designed to cater to a wide range of applications across multiple market sectors - from high-speed internet access, distance learning and

digital signage/media solutions, to the most demanding enterprise and government networking requirements. It is also designed to provide "direct-to-premise services" for community centers and schools that benefit from local government programs as well as "community hotspot" solutions across the regions it covers.

Business Continuity

For many organization, especially governmental entities and finance institutions, a short-term interruption of operations may cause huge losses. YahClick is an ideal backup for your terrestrial network. With a minimal monthly contribution, it allows for your critical operations to run at all times, covering connectivity for key business applications, emails, web access and more. From an ATM or petrol station to a large organization with multi-level IT hierarchy, we have you covered.

Digitalization for Remote Units

For remote business units, like oil rigs, mines and construction sites, IEC Telecom offers a combined solution

providing controlled welfare and secure corporate link over one terminal, enabling you to manage bandwidth, monitor usage consumption and control your budget in real time. In addition, customers are able to benefit from our experienced 24/7 customer support.

IEC Welfare keeps your team connected with access to messengers, social media, web browsing, infotainment and more. Provide your hardworking crew with scratch cards for high-quality on demand data access – scratch cards are available in 1, 5 or 10 GB packages.

Go even further with VAS from IEC Telecom

- Remote maintenance
- Remote surveillance
- Centralized voucher management system
- Filtration and usage control
